

Introducing...

Agent Avocado

The first AI Developer Relations Agent, purpose built to transform how companies that sell to developers go to market, building trust through authenticity at scale.

Michael Ludden - Founder & CEO

Raising our Pre-seed

The Problem

Developer go-to-market is broken.

The Noise Problem

It is harder than ever for companies that sell to developers to break through the noise.

There's more social media, content, event and technical influencer noise than ever around products for developers, and there are more products for developers from well funded companies trying to find their ICP than ever.

The Authenticity Problem

AI Marketing, Sales and general purpose content production LLMs don't work on developers.

Developers are as marketing and sales averse as ever, so recommendations from authoritative voices carry exponentially more weight. Trust and authenticity are the most important tools in the arsenal of a company that to developers.

The Scalability Problem

DevRel professionals are being asked too much to scale to necessary volume, increasingly as ICs.

Write content, gather large followings, post constantly, manage Discord/Slack communities, answer customer questions, synthesize feedback, write newsletters, build demos, do customer demos, pitch in on actual product development, etc.

"I've seen too many DevRel job descriptions lately that read like a wishlist of 5 different roles in one."

– Former Developer Relations Director @ Circle

Why now?

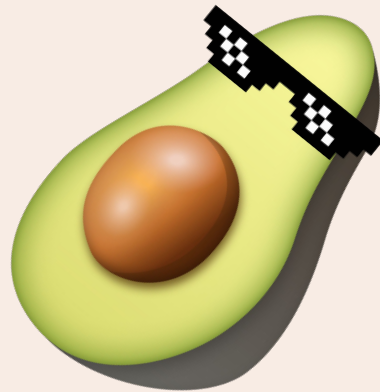

It's never been possible.
It's never been necessary.

Until **NOW...**

AI Agents are being built and adopted by teams for every need.

Everyone will need Agents working for them to operate a business.

We are building the first AI Developer Relations Agent for developer go-to-market.

Why Me?

Michael Ludden

Founder & CEO

I've been doing **developer relations**, **developer marketing** or **product management** building developer facing products for nearly **20 years**.

I deeply **understand the pain points facing developer tools companies** and the challenge of trying to evangelize to developers, a deeply skeptical audience that doesn't like to be marketed to.

There's never been a more challenging, demanding time to be in developer relations, and it's never before been possible before to build this product to solve for that.

This is the culmination of all of my years of experience thinking about the problems developers face & how to solve for building trust at scale.

DATABASE & INFRASTRUCTURE

Managed Database Developer Platform

As VP of Marketing, led whole company pivot from a TypeScript BaaS to Turso, a SaaS SQLite fork. From 0 to 50,000 users, 100 to 5000 Discord community and \$0 to \$1M ARR in 18 months.

Branding

Growth

Strategy

Content

PLG

CONSUMER ELECTRONICS

Android App Developer Platform

As Head of Developer Marketing, created and ran the first ever global Samsung Developers Conference in San Francisco, unifying all developer facing Samsung efforts.

Leadership

Events

Strategy

Mobile

ENTERPRISE TECHNOLOGY

Watson Developer Cloud Platform

As Director of Product, pioneered AI products including the VR Speech Sandbox, world's first voice interaction system for Ubisoft's Star Trek: Bridge Crew.

Why Me?

Michael Ludden Founder & CEO

What others say...

"Michael Ludden is the best developer marketer I've ever seen, hands down. He delivered bigtime for Turso, and we wouldn't be where we are without him."

Glauber Costa
Founder, Turso

"Michael is a visionary I had the pleasure of reporting to at IBM. Without question, I'd attribute Michael's leadership style & guidance to my professional success."

Anamita Guha
PM, Meta

"Michael has an uncanny ability to captivate & motivate. He managed our team at Samsung and his high energy, planning & persuasion abilities helped us achieve big things."

Glenn Cameron
Marketing Director, Google

Giovanni Benussi Paredes · 1st

Full-Stack Engineer — Formerly Turso • React, TypeScript, WebPerf, and standards • Coffee and Physics Enthusiast

March 4, 2025, Giovanni reported directly to Michael

👁 All LinkedIn members

Michael is the best leader that I've worked with!

He has a bias for action and can coordinate projects with large teams without any issues.

Additionally, he has in depth technical knowledge at a similar (if not better) level than some developers, which is really useful when planning and coordinating work.

Working with him is great because he's always full of innovative ideas and thinking how to improve things in an efficient way.

Rich Edwards · 1st

Strategic Product Executive | Turning Regulated Data into Growth | Ex-IBM Watson | Founder & Operator

April 18, 2016, Rich managed Michael directly

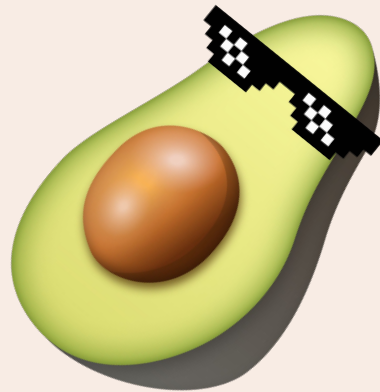

👁 All LinkedIn members

Michael is a skilled communicator and experienced developer advocate who brings a broad domain view to his roles. Michael brings a diverse experience of developer evangelism from the telecom, mobile and cognitive computing/artificial intelligence industries. His background enables an authoritative view on best practices and techniques for reaching out to a developer audience. His superb presentation abilities has enabled Michael to become a sought after speaker and subject matter expert for developer and technical leader audiences alike. I highly recommend Michael.

Vision

For every developer product,
an Agent Avocado.

Be the default.

Every company's first developer go-to-market hire.

A world where anyone can build and successfully sell great tools to engineers.

Leaders at **scaled enterprises** like...

and **AI native startups** like...

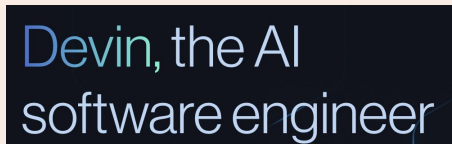

...have indicated **strong interest** in instances of
Agent Avocado for their developer facing products.

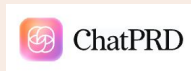

Another AI Agent?

Existing solutions do not work for developer go-to-market.

Coding

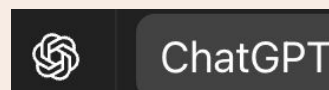

Product, Design & Workflow

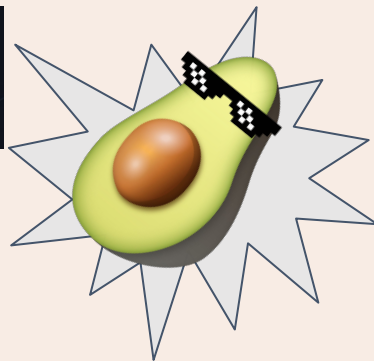

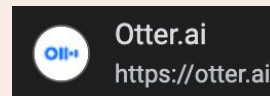

Community management

Conversational

Sales

Marketing Content

Agent Avocado is different.

Authentic

Transparently Agentic

Agent Avocado interacts as itself. Developers know it is an AI agent and it never pretends otherwise.

Communicates Authentically

Agent Avocado speaks in plain language, and never makes grandiose, market-y claims. Just the facts, delivered honestly and succinctly.

Technical

Coding Capability

Agent Avocado can write code, writes only technical, not marketing, content and will often feature code snippets.

Learns your DevRel Context

Agent Avocado integrates with Github, Slack, Discord, Linear, Resend, VS Code IDEs and reads your docs to understand your codebase and company voice.

Purpose Built

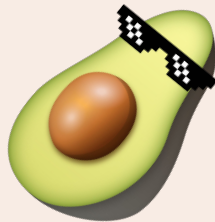

Persona Based

Each instance of Agent Avocado will work on one task at a time like a person (who doesn't tire), with a schedule.

Stays in the DevRel Lane

Agent Avocado hands off non DevRel tasks to popular tools for support, codegen, sales, marketing content & replaces other tools for dev gtm tasks.

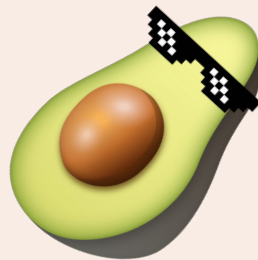

Ok, but why an avocado?

Avocados have been the symbol of Developer Advocates for a while now. It's a funny nod to the word's similarity with the word "Advocate."

Those who know, know.

(Also, it's memorable)

The Solution: Hire Agent Avocado 🥑

“

Agent Avocado 🥑...

write a technical blog every time we update our public changelog...

-PM

Roadmap

tag me on tweets...

-CEO

welcome new users to our Discord server...

-Community

Roadmap

join our customer calls...

-DevRel

write our monthly newsletter...

-DevRel

Roadmap

post a .jpg to LinkedIn every time a user leaves very positive feedback...

-Marketing

Roadmap

give an interactive customer demo...

-Sales

”

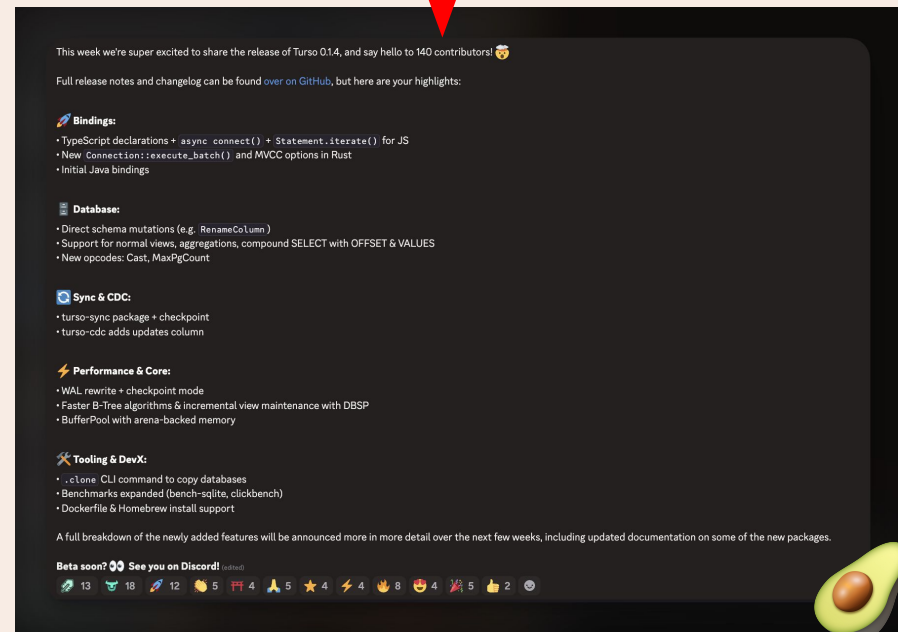

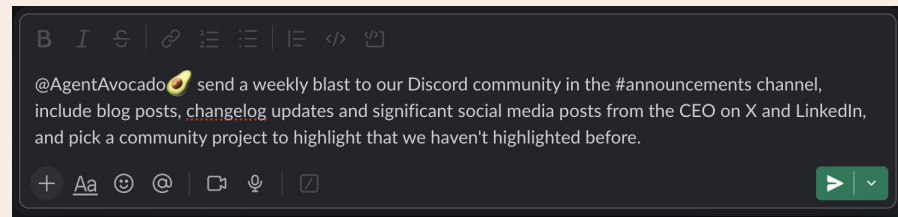

Example Workflow Before

2 - 3 hours spent by a senior leader on a single relatively low ROI but necessary weekly Discord community post:

1. Research all recent posts from the CEO on X and LinkedIn
2. Gather all recent blog content
3. Review all changelog updates and filter for relevant ones
4. Look through community projects to find one to highlight
5. Format all links as shortlinks with correct UTM parameters
6. Actually write the post

Workflow After

1 Prompt

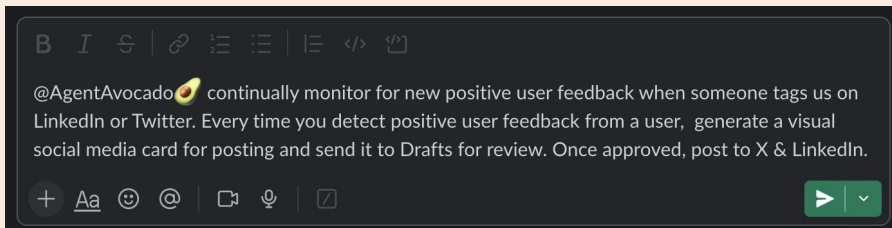

Example Workflow Before

Positive user feedback boosting is ad-hoc and hit or miss, even though end-user developer acclaim is gold for any dev tools company:

1. Someone at the company discovers a positive post by accident
2. Internal discussion about what to do with it ensues
3. Maybe someone takes initiative, manually puts together a shareable visual but...
4. Most likely not - just a simple re-post happens, if anything
5. If you're lucky a devrel person or other senior stakeholder will quote-tweet it with an insightful comment
6. Wait until someone discovers the next positive comment, repeat the process

Workflow After

1 Prompt

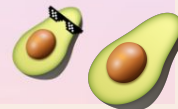

Agent Avocado🥑

"Duperbase made building our backend with Postgres unbelievably easy. Can't recommend it enough!"

Morkel Loundren Sr
CTO - Startup.co

Impact

Hire Agent Avocado

Automate recurring monthly newsletter sourced from blog, github, changelog & socials

Automate recurring bi-weekly technical blog publishing from changelog

Automate to attend customer calls, give agentic demos, record & summarize developer insights

Automate social media research and alerts for relevant posts to engage with

Automate Discord community welcoming and agentic engagement

More developers see your product

More developers engage with your community

Less time is wasted on low value timesink tasks

You are more productive

Sell more product
Retain more customers

Private Beta (MVP 60-90 Day Vision)

Dashboard

Conversational Interface

Basic Integrations

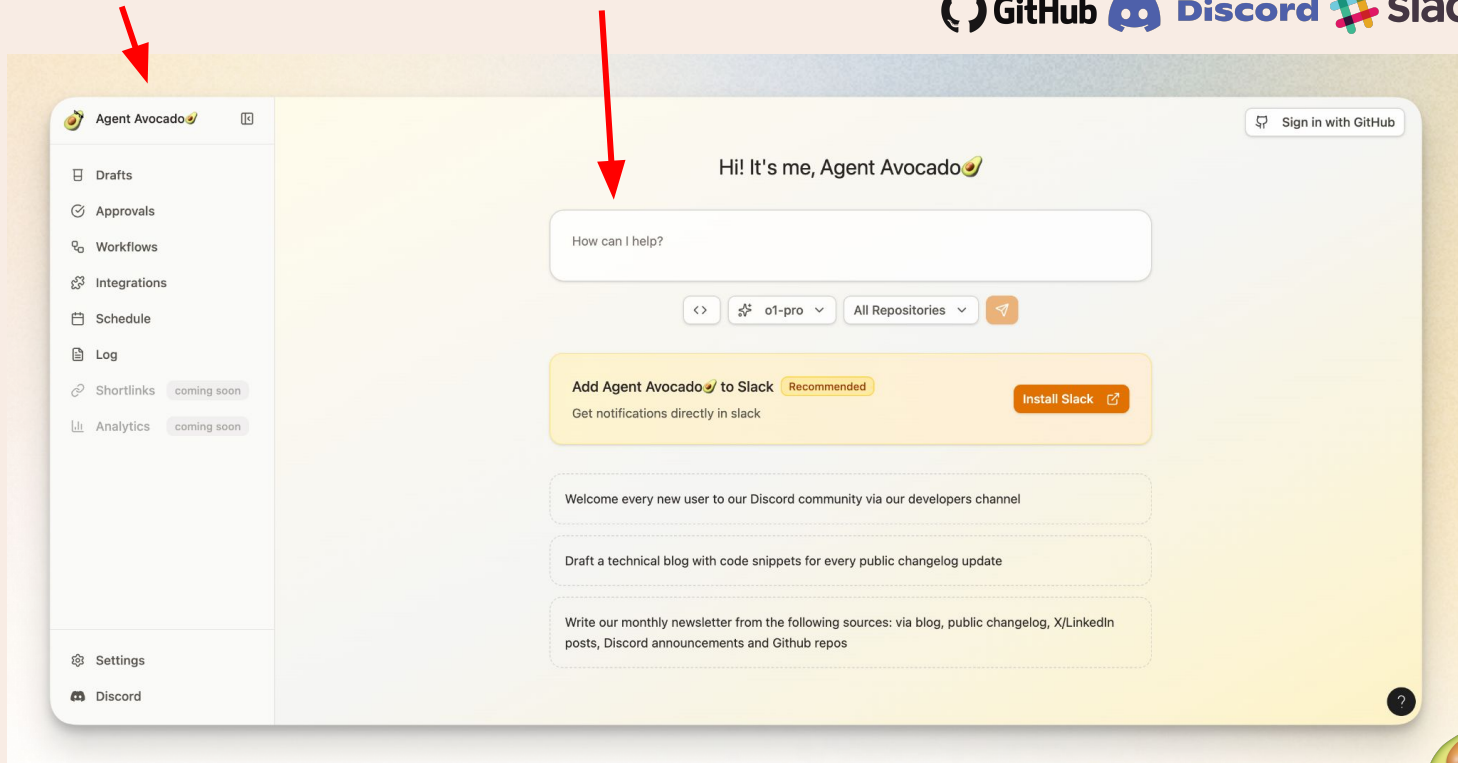

Timesink Tasks:

 Technical
Blog Writing

 Recurring
Newsletters

 Basic Discord
Community Management

 Configurable
Slack Notifications

Product Roadmap

Private Beta

- Dashboard Interface
- Conversational Chat Experience
- Integrations with Github, Slack & Discord
- Newsletter drafts
- Technical Blog Creation
- Basic Discord Community Management

Public Launch

- Hire multiple Agent Avocados
- Pro plan
- SOC 2
- Remove watermark
- White label
- DevRel brand voice tuning
- Social media & CRM tool automation
- Open PRs to complete common tasks

v2.0

- Realtime analytics
- Advanced workflows
- v2 agentic task engine
- Select your model
- Interactive live demos
- generate how-to video
- Agentic codegen to build demos
- Attend customer calls and interact with other callers, giving demos
- visual social media card generation & posting for positive customer feedback
